Staff Training and Development ~ Occupational Health & Safety Management System

(OHSAS) 18001

Occupational health and safety system helps to provide a framework to minimize and/or prevent workplace accidents, injuries, illnesses and even fatalities. In these days of greater emphasis toward corporate sustainability, an increasing number of customers and stakeholders are placing greater emphasis and requirement for sound occupational health and safety policies. A company which systematically manages its health and safety policies, procedures and protocols reaps the benefits of enhancing its values and image as a business that is socially responsible.

On 4 May 2016, twenty staff from our Ipoh factories attended training for the certification of Occupational Health and Safety Management System (OHSAS) 18001. OHSAS 18001 has rapidly become the most widely used international occupational health and safety management standard used globally. Applied in the context of the K-One Group, this helps our factories to systematically manage and control our occupational health and safety risks and to continuously improve our occupational health and safety performance.

Brainstorming session in progress

The training session was facilitated by Mr. Chiam Daw Jye, a principal consultant with SQC Management. His vast experience in establishing ISO 9001, ISO 14001, ISO 22000, ISO/TS 16949, ISO/IEC 17025, OSHAS 18001, FSSC 22000, GMP and HACCP certifications in various industries such as plastic, furniture, precision tooling, wire harness, steel, plating, stamping, construction and food qualified him to be a suitable facilitator.

Participants for the ISO 18001 certification training

As a health and safety conscious Group, K-One goes beyond the legal requirements with the conduct of regular activities toward promoting healthy and safe working conditions. The certification of ISO 18001 serves to re-affirm to our customers and stakeholders that K-One is committed to our staff's health and safety.
