Demo of NASA-JPL licensed K-One's Medkaire Ventilator in Hospital

K-One's ventilator branded as Medkaire which is licensed by NASA-JPL was put on demo in a hospital in Malaysia recently. The doctors and members of the medical fraternity responded positively to K-One's Medkaire ventilator.

K-One's Medkaire ventilator, currently pending the approval of the Medical Device Authority (MDA) is the first Malaysian branded ventilator which is manufactured locally. The Medkaire ventilator is suitable for use by COVID-19 patients experiencing severe breathing difficulties. It is a sustainable business which will continue to have demand post-COVID-19 to aid patients with breathing difficulties. It is K-One's goal to lead the way to make Malaysia recognized as an innovator and manufacturer of good quality ventilators.

We have our fair share of trials and tribulations in the development of our locally branded Medkaire ventilator. Our management and technical teams persevered to have achieved key milestones thus far. We have also garnered strong support from the statutory authorities, medical fraternity, suppliers and the healthcare ecosystem. We are proud that the tremendous support gathered far outweighs the naysayers.

Thank you for the all-round support and K-One sincerely appreciates it.
